Bus Rapid Transit Systems and Metropolitan Urban Mobility.

Bus rapid transit (BRT), also called a busway or transitway, is a bus-based public transport system designed to have much more capacity and reliability than a conventional bus system. Typically, a BRT system includes roadways that are dedicated to buses, and gives priority to buses at intersections where buses may interact with other traffic; alongside design features to reduce delays caused by passengers boarding or leaving buses, or purchasing fares. BRT aims to combine the capacity and speed of a light rail or metro system with the flexibility, lower cost and simplicity of a bus system.
